OpenText Core Data Discovery & Risk Insights Release Notes

Processing agent version: 26.3.103

Supported with application version: 26.3.x

Publication date: September 2026

This document is an overview of the changes made to the Core Data Discovery & Risk Insights processing agent.

Upgrade

Upgrade information is defined in the README.md file in the release package.

IMPORTANT This product release and release notes are relevant to the processing agent 26.3.103 supported on application 26.3.x version.

While the prior release's Agent (26.3.102) remains compatible with this application's version for existing functionality, product enhancements and fixes may require upgrade to the latest version of the agent.

To facilitate transition to the new version, the processing agent 26.3.102 can be used for a transitional period of 4 weeks after upgrade of the application to 26.3.x version. Beyond this grace period, out of date agents will be automatically disconnected and an upgrade will be mandatory to reconnect and process data.

Enhancements

- [429400] Exchange Online mailboxes can now be scanned successfully when a user's login name and primary email address are different.

Bug Fixes

Processing Agent

- [429302] Fixed an issue where a dataset's index could show an incorrect item count after processing items from a workbook when some of those items had been deleted from the source. The dataset index now correctly reflects only the items that are still present at the source after the operation completes.
- [429302] Fixed an issue where an email moved to a different folder within the same mailbox could go undetected when the file analysis workbook action was performed using the Exchange Graph API; moved messages are now properly flagged and reconciled.
- [429779] Fixed an issue where sensitive data embedded in hyperlink URLs within Word documents was not masked during a mask-at-source operation. Both the display text and the underlying URL of a hyperlink are now fully masked when they contain sensitive information.

Known Issues

- None
